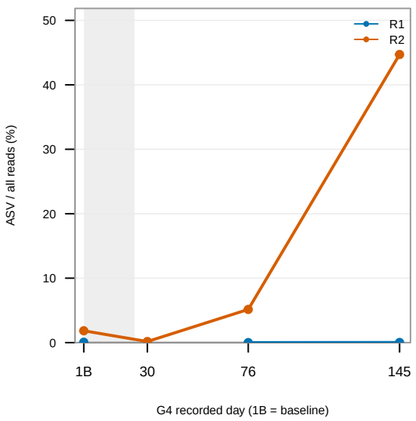
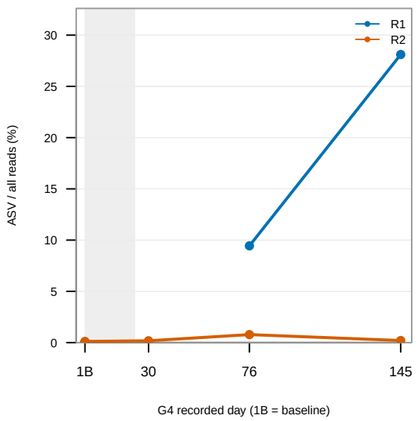
Batch_01 | Module 2.6 | Fixed focal ASV trajectories and comparisons | V2

A: R1/R2 divergence B: R3 later period C: R2/R4 convergence | Each ASV panel has its own y scale

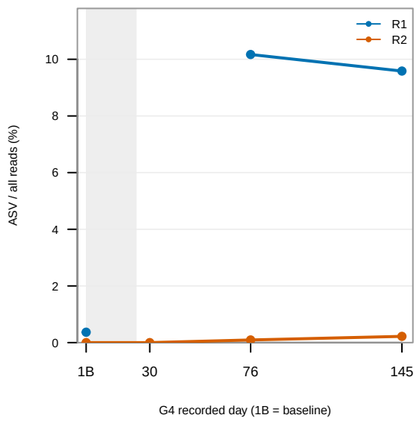
A C01 [GAO−related]
SILVA: Candidatus_Competibacter
MiDAS review: Ca_Competibacter lineage



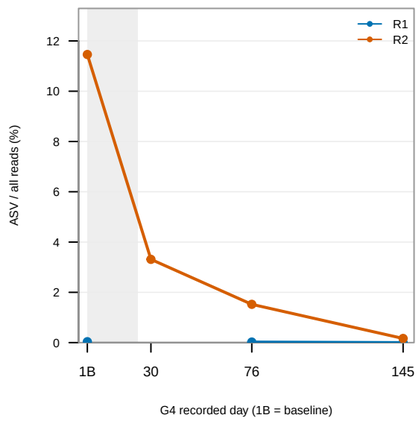
A C02 [target]
SILVA: Incertae_Sedis
MiDAS review: Sphingobacteriales; midas_g_9646 code



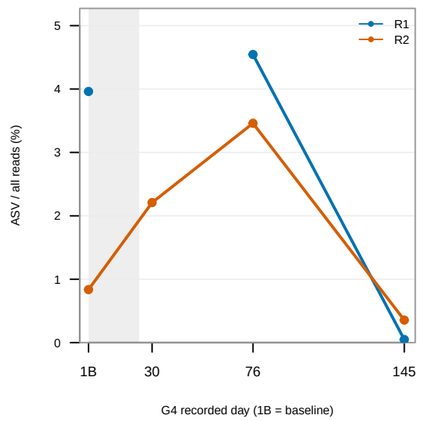
A C10 [target]
SILVA: Chryseosolibacter
MiDAS review: Cytophagales; Microscillaceae candidate



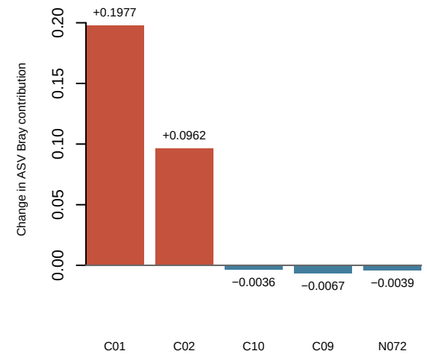
A C09 [target]
SILVA: unassigned (Paracoccaceae)
MiDAS review: Rhodobacterales; genus unresolved



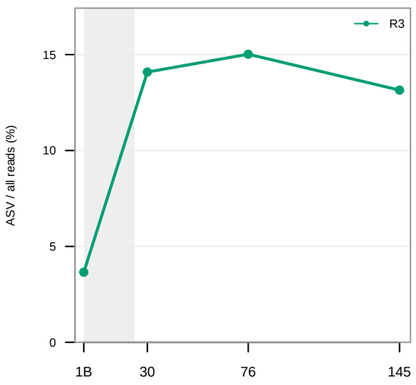
A N072 [target]
SILVA: OLB8
MiDAS review: Ca_Vicinibacter lineage; no species



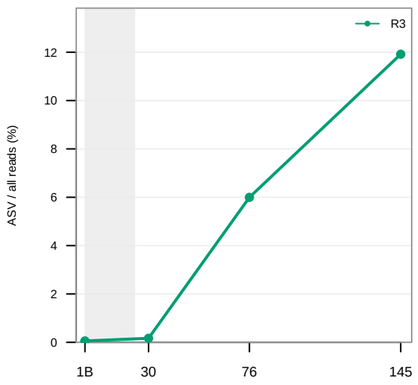
A | gap change, 76 −> 145d
Original module 2.1 contributions
+ expands gap; − narrows gap



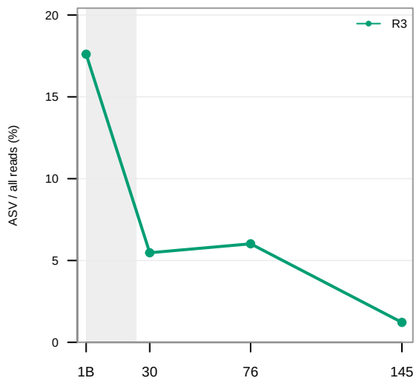
B C03 [GAO−related]
SILVA: Defluviicoccus
MiDAS review: Defluviicoccus lineage



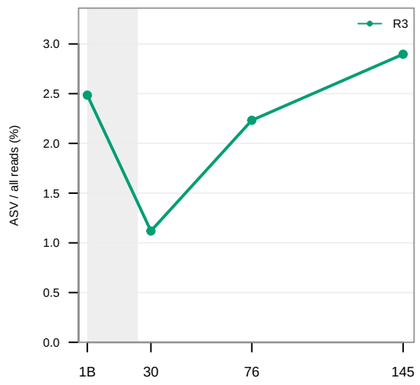
B C04 [target]
SILVA: Chryseotalea
MiDAS review: Cytophagales; midas_g_85782 code



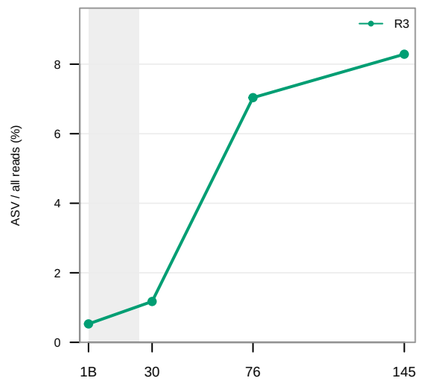
B C05 [target]
SILVA: Aridibacter
MiDAS review: Blastocatellaceae; genus unresolved



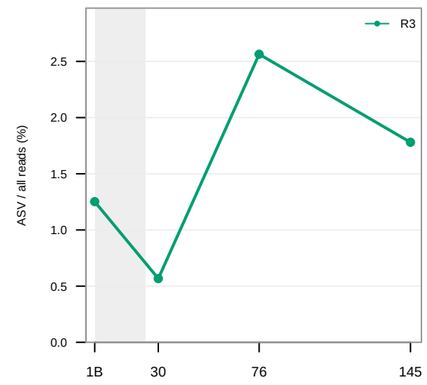
B N026 [target]
SILVA: Phototrophicus
MiDAS review: Anaerolineae; near midas_g_29983



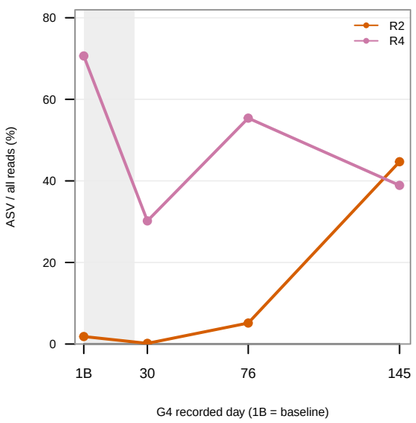
B N045 [target]
SILVA: Candidatus_Tepidaquicella
MiDAS review: Ignavibacteria / SJA−28; midas_g_171 code



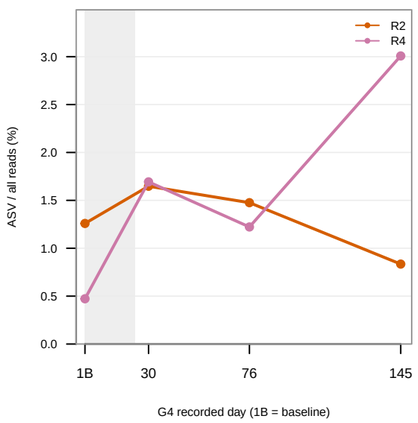
B N072 [target]
SILVA: OLB8
MiDAS review: Ca_Vicinibacter lineage; no species



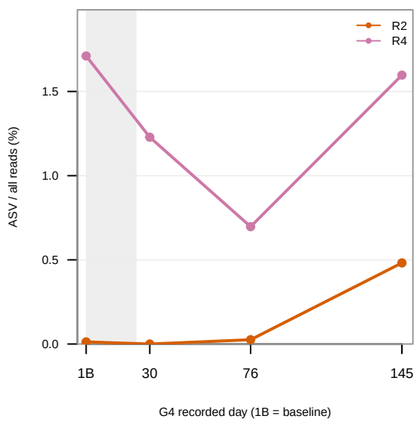
C C01 [GAO−related]
SILVA: Candidatus_Competibacter
MiDAS review: Ca_Competibacter lineage



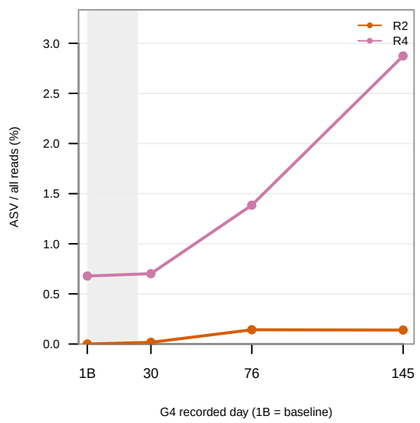
C C03 [GAO−related]
SILVA: Defluviicoccus
MiDAS review: Defluviicoccus lineage



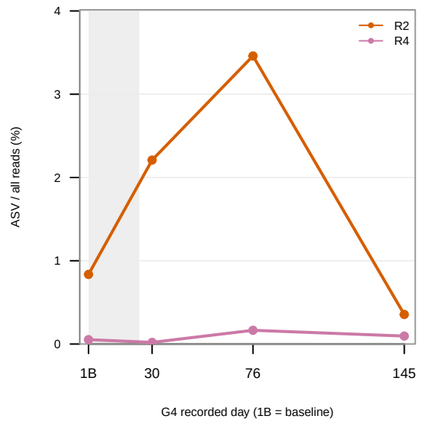
C N026 [target]
SILVA: Phototrophicus
MiDAS review: Anaerolineae; near midas_g_29983



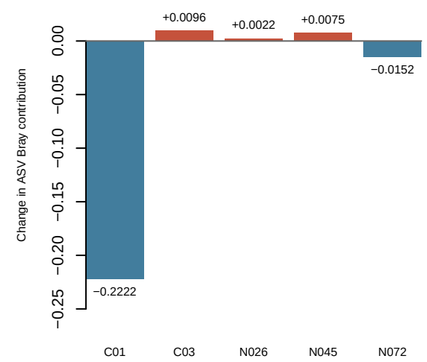
C N045 [target]
SILVA: Candidatus_Tepidaquicella
MiDAS review: Ignavibacteria / SJA−28; midas_g_171 code



C N072 [target]
SILVA: OLB8
MiDAS review: Ca_Vicinibacter lineage; no species



C | gap change, 76 −> 145d
Original module 2.1 contributions
+ expands gap; − narrows gap



Taxonomy review is inherited from module 2.5; reference physiology is not ASV activity. No significance, interaction, temperature or DO causal inference.
G4 only: distinct starting sludges; R1/R3 at 30 C, R2/R4 room temperature unknown. G1/G2G3 rounds and G5 fractions remain separate in TSV/report.
1B = recovered baseline before low−DO switch; grey = days 1−24 adjustment interval. Later setpoint: 0.5 +/− 0.2 mg/L; instantaneous DO unknown.
Dots are actual samples; lines are visual guides. R1 d30 is absent: no dot or line through that scheduled node. No interpolation.
