G4 | individual functional-associated taxa

Each panel has its own y scale. Grey: baseline / adjustment interval; later samples are design-stable period (DO setting 0.5+/-0.2).

Acinetobacter
Amaricoccus
Ca. Accumulibacter
Ca. Brocadia--other
Ca. Competibacter
Ca. Contendibacter
Ca. Obscuribacter
Dechloromonas
Defluviicoccus
Nitrosomonas
Nitrospira
Propionivibrio--other
Thauera

Fraction of ALL ASV reads

Recorded G4 day; lines join observed samples only (no interpolation)

Sampling position ● Post-adaptation sample ○ Before-switch baseline

Reactor R1 R2 R3 R4

Candidates and ambiguous taxa are shown as taxa, not assigned functions. Baseline DO setting uncertain in analysis metadata. R1 has no d30 observation.
